Package 'metaVAR'

June 20, 2024
Title Multivariate Meta-Analysis of Vector Autoregressive Model Coefficients
Version 0.9.1
Description Estimates the mean vector and covariance matrix of the multivariate meta-analysis of vector autoregressive model coefficients.

2 FitCTVAR

FitCTVAR

Fit First Order Continuous-Time Vector Autoregressive Model by ID

Description

Fit First Order Continuous-Time Vector Autoregressive Model by ID

Usage

```
FitCTVAR(
   data,
   observed,
   id,
   time,
   phi_start = NULL,
   phi_lbound = NULL,
   phi_ubound = NULL,
   sigma_start = NULL,
   sigma_lbound = NULL,
   sigma_ubound = NULL,
   try = 1000,
   ncores = NULL
)
```

Arguments

ncores

data	Data frame. A data frame object of data for potentially multiple subjects that contain a column of subject ID numbers (i.e., an ID variable), and at least one column of observed values.
observed	Character vector. A vector of character strings of the names of the observed variables in the data.
id	Character string. A character string of the name of the ID variable in the data.
time	Character string. A character string of the name of the TIME variable in the data.
phi_start	Optional starting values for phi.
phi_lbound	Optional lower bound for phi.
phi_ubound	Optional upper bound for phi.
sigma_start	Optional starting values for sigma.
sigma_lbound	Optional lower bound for sigma.
sigma_ubound	Optional upper bound for sigma.
try	Positive integer. Number of extra tries for OpenMx::mxTryHard().

Positive integer. Number of cores to use.

FitDTVAR

Fit First Order Discrete-Time Vector Autoregressive Model by ID

Description

Fit First Order Discrete-Time Vector Autoregressive Model by ID

Usage

```
FitDTVAR(
   data,
   observed,
   id,
   beta_start = NULL,
   beta_lbound = NULL,
   beta_ubound = NULL,
   psi_start = NULL,
   psi_lbound = NULL,
   psi_ubound = NULL,
   try = 1000,
   ncores = NULL
)
```

Arguments

data	Data frame. A data frame object of data for potentially multiple subjects that contain a column of subject ID numbers (i.e., an ID variable), and at least one column of observed values.
observed	Character vector. A vector of character strings of the names of the observed variables in the data.
id	Character string. A character string of the name of the ID variable in the data.
beta_start	Optional starting values for beta.
beta_lbound	Optional lower bound for beta.
beta_ubound	Optional upper bound for beta.
psi_start	Optional starting values for psi.
psi_lbound	Optional lower bound for psi.
psi_ubound	Optional upper bound for psi.
try	Positive integer. Number of extra tries for OpenMx::mxTryHard().
ncores	Positive integer. Number of cores to use.

Other Meta-Analysis of VAR Functions: FitCTVAR(), Meta()

Meta

Fit Multivariate Meta-Analysis

Description

This function estimates the mean and covariance matrix of a vector of coefficients using the estimated coefficients and sampling variance-covariance matrix from each individual.

Usage

```
Meta(object, mu_start = NULL, sigma_l_start = NULL, try = 1000, ncores = NULL)
```

Arguments

object Object of class metavardtvar, that is, the output of FitDTVAR().

mu_start Numeric matrix. Matrix of starting values of mu.

sigma_l_start Numeric matrix. Matrix of starting values of t(chol(sigma)).

try Positive integer. Number of extra tries for OpenMx::mxTryHard().

ncores Positive integer. Number of cores to use.

Details

For $i = \{1, \dots, n\}$, the objective function used to estimate the mean μ and covariance matrix Σ of the random coefficients y_i is given by

$$\ell\left(\boldsymbol{\mu},\boldsymbol{\Sigma}\mid\mathbf{y}_{i},\mathbb{V}\left(\mathbf{y}_{i}\right)\right)=-\frac{1}{2}\left[q\log\left(2\pi\right)+\log\left(\left|\mathbb{V}\left(\mathbf{y}_{i}\right)-\boldsymbol{\Sigma}\right|\right)+\left(\mathbf{y}_{i}-\boldsymbol{\mu}\right)'\left(\mathbb{V}\left(\mathbf{y}_{i}\right)-\boldsymbol{\Sigma}\right)^{-1}\left(\mathbf{y}_{i}-\boldsymbol{\mu}\right)\right]$$

where q is the number of unique elements in μ and Σ , and $\mathbb{V}(\mathbf{y}_i)$ is the sampling variance-covariance matrix of \mathbf{y}_i .

Value

Returns an object of class metavarmeta which is a list with the following elements:

call Function call.

args Function arguments.

fun Function used ("Meta").

output Fitted model.

transform Transformed estimates.

print.metavarmeta 5

print.metavarmeta

Print Method for Object of Class metavarmeta

Description

Print Method for Object of Class metavarmeta

Usage

```
## S3 method for class 'metavarmeta'
print(x, alpha = 0.05, digits = 4, ...)
```

Arguments

x an object of class metavarmeta. alpha Numeric vector. Significance level α .

digits Integer indicating the number of decimal places to display.

... further arguments.

Author(s)

Ivan Jacob Agaloos Pesigan

summary.metavarmeta

 ${\it Summary Method for Object of Class} \ {\it metavarmeta}$

Description

Summary Method for Object of Class metavarmeta

Usage

```
## S3 method for class 'metavarmeta'
summary(object, alpha = 0.05, digits = 4, ...)
```

6 summary.metavarmeta

Arguments

 $object \hspace{1cm} an \hspace{1cm} object \hspace{1cm} of \hspace{1cm} class \hspace{1cm} metavarmeta.$

alpha Numeric vector. Significance level α .

digits Integer indicating the number of decimal places to display.

... further arguments.
